## Fellowes (Array) Power of Networked Air Quality Systems

Leverage the benefits of networking through the power of secure LTE service and Viewpoint Plus.

## Advantages of Networked Systems

- Connect multiple units to create proactive coverage: Array's unique sensor sharing technology ensures that all units in a connected Area work as a cohesive system to mitigate contaminants faster.
- Flexibility to adjust and refine multi-unit coordination based on changes to utilization of spaces
- Collect insightful data regarding performance and maintenance
- Unit controls, scheduling and timers for all units, without needing to be in the same physical space

## Power of Connecting with LTE

- No limit to the number of units in your network
   and you can expand your system as needed with additional building locations and/or Areas
- No distance requirements between units to complete networking
- Secure cloud-based dashboard provides world-wide access
- Multi-cellular provider design searches and selects the strongest signal available, ensuring connectivity strength
- Easily created network without connection to the main company network
